

Scientific Proof of the Bible

The Bible is estimated to have been written between 1450 B.C. and 95 A.D. This chart shows scientific facts and principles referred to in this ancient Bible, but not actually discovered by humankind until later centuries. Dead sea scrolls, historical documentation, and word of mouth all confirm the authenticity of the Bible and when it was created. Since people had no official knowledge of these scientific facts until more than a thousand years after the Bible was written, is this scientific proof that the Bible was inspired by God?
